

What Size Greasetrap Do I Need?

Use this formula or calculation to find the right size grease trap for your kitchen setup.

1. Length x Wide x Depth of Your Bowls (all total, example: a 3-compartment sink, add up each compartment L x W x D for a total.)	
2. Multiply that Number by the Number of Bowls (i.e. for a 3-compartment sink, multiply by 3)	
3. Divide by 231 (This gives you contents in gallons)	
4. Multiply by .75 (Gives you grease capacity lbs.)	
5. Look Up Capacity (lbs.) to Find Grease Trap Model
